

clipBOX is an inventive packaging system, utilising plywood panels held together by durable clips. The clipBOX concept is primarily a collapsible, returnable and re-usable packaging system but because of its exceptional strength and reliability it is often used for one-way packaging.

Each clipBOX is customised for the product and interior dunnage and stillages can be designed and supplied if required. Being manufactured from plywood, clipBOXes are excluded from ISPM 15 (International Standards for Phytosanitary Measures) and may be used freely for exports without heat treatment or fumigation.
